
HA12163 Series

Audio Signal Processor for Car Deck and Cassette Deck
(Dolby B-type NR with PB Amp)

HITACHI

ADE-207-059C (Z)

4th Edition
Jun. 1999

Description

HA12163 series are silicon monolithic bipolar IC providing Dolby noise reduction system*, music sensor and PB equalizer system in one chip.

Functions

- PB equalizer × 2 channel
- Dolby B-NR × 2 channel
- Music sensor × 1 channel

Features

- Different type of PB equalizer characteristics selection (normal/chrome or metal) is available with fully electronic control switching built-in.
- 2 type of input selection (radio/tape) is available.
- Changeable to forward, reverse-mode for PB head with fully electronic control switching built-in.
- Available to change music sensing level by external resistor.
- Music sensing level selection is available with fully electronic control switching built-in.
- Available to change frequency response of music sensor.
- NR-on/off and REC/PB fully electronic control switching built-in.
- 4 type of PB-out level.
- Available to allow common PCB designs with HA12173 series.

* Dolby is a trademark of Dolby Laboratories Licensing Corporation.
A license from Dolby Laboratories Licensing Corporation is required for the use of this IC.

HA12163 Series

Ordering Information

	PB-OUT level	Dolby level	REC-OUT level	Unit	Package
HA12163	300	300	300	mVrms	FP-56
HA12166F					FP-48
HA12164	450	300	300	mVrms	FP-56
HA12165	580	300	300	mVrms	FP-56
HA12160	550	300	300	mVrms	FP-56

- Notes: 1. PB-OUT level above shown is typical value when adjusting Dolby level at Rec-out with NR-off mode.
2. HA12166F is only changes by package from HA12163. It is the same electrical characteristics that HA12163.

Absolute Maximum Ratings

Item	Symbol	Ratings	Unit
Supply voltage	V_{cc} max	16	V
Power dissipation* ¹	Pd	400* ²	mW
Operating temperature	Topr	-40 to +85	°C
Storage temperature	Tstg	-55 to +125	°C

- Notes: 1. Value at $T_a \leq 85^\circ\text{C}$
2. HA12166F = 360 mW

Operating Voltage Range

Type	Min	Max	Unit
HA12163, HA12166F	6.5	16	V
HA12164	7.2	16	V
HA12165	8.5	16	V
HA12160	8.2	16	V

- Note: 1. The minimum operating voltage of HA12163 series are different from the HA12173 series (Dolby B/C-type).

Block Diagram (HA12163/164/165/160)

Electrical Characteristics (Ta = 25°C Dolby level 300 mVrms (Rec-out pin))

HA12163, HA12166F V_{cc} = 9.0 V HA12164 V_{cc} = 9.0 V

HA12165 V_{cc} = 12 V HA12160 V_{cc} = 9.0 V

Item	Symbol	Min	Typ	Max	Unit	Test conditions	Note
Quiescent current	I _Q	6.0	11.0	17.0	mA	No input	No Signal NR-ON, 70 μ

Application Note

1. Power Supply Range

HA12163 series are provided with four line output level, which will permit on optimum overload margin for power supply conditions. And this series are designd to operate on single supply only. In case of split supply use, please consult with sales engineer.

Table 1 Supply Voltage

	HA12163	HA12164	HA12165	HA12160
Single supply	6.5 V to 16.0 V	7.2 V to 16.0 V	8.5 V to 16.0 V	8.2 V to 16.0 V

A. The lower limit of supply voltage depends on the line output reference level.

The minimum value of the overload margin is specified as 12 dB by Dolby Laboratories.

B. In the reverse-voltage conditions such as ‘D-GND is higher than V_{CC} ’ or ‘D-GND is lower than GND’, excessive current flows into the D-GND to destory this IC. To prevent such destruction, pay attention to the followings on using.

Short-circuit the D-GND and GND directory on the board mounting this IC.

2. Reference Voltage

These devices provide the reference voltage of half the supply voltage that is the signal grounds. As the peculiarity of these devices, the capacitor for the ripple filter is very small about 1/100 compared with their usual value. The Reference voltage are provided for the left channel and the right channel separately. The block diagram is shown as figure 1.

Figure 1 The Block Diagram of Reference Voltage Supply

HA12163 Series

3. Operating Mode Control

HA12163 series provide fully electronic switching circuits. And each operating mode control are controlled by parallel data (DC voltage).

Table 2 Threshold Voltage (V_{TH})

Pin No.	Low	High	Unit	Test conditions
14, 15, 16, 17, 18, 19	-0.2 to 1.5	3.5 to 5.3	V	

Table 3 Switching Truth Table

Pin No.	Low	High
14	NR - OFF	NR - ON
15	PB	REC
16	TAPE	RADIO
17	120 μ (NORMAL)	70 μ (METAL or CHROME)
18	FORWARD	REVERSE
19	SER (FF or REV)	REP (NORMAL SPEED)

- Notes:
1. Each pins are on pulled down with 100 k Ω internal resistor. Therefore, it will be low-level when each pins are open.
 2. Over shoot level and under shoot level of input signal must be the standardized (High: 5.3 V, Low: -0.2 V)
 3. When connecting microcomputer or Logic-IC with HA12163 series directly, there is apprehension of rush-current under some transition timing of raising voltage or falling voltage at V_{cc} ON/OFF. On using, connect protective resistors of 10 to 22 k Ω to all the control pins. It is shown is test circuit on this data sheet. And pins fixed to low level should be preferably open.
 4. Pay attention not to make digital GND voltage lower than GND voltage.

4. Input Block Diagram and Level Diagram

Figure 2 Input Block Diagram

5. Adjustment of Playback Dolby Level

After replace R34 and R35 with a half-fix volume of 10 kΩ, adjust RECOUT level to be Dolby level with playback mode.

HA12163 Series

6. Note on Connecting with Tape Head to IC

This IC has no internal resistor to give the DC bias current to equalizer amp, therefore the DC bias current will give through the head. This IC provides the V_{ref} buffer output pin for Rch and Lch separately (has two V_{ref} terminal). In case of use that the Rch and Lch reference of head are connected commonly, please use one of V_{ref} terminals of IC (47 pin or 52 pin) for head reference. If both 47 pin and 52 pin of IC are connected, rush current give the great damage to IC. The application circuit is shown in figure 3.

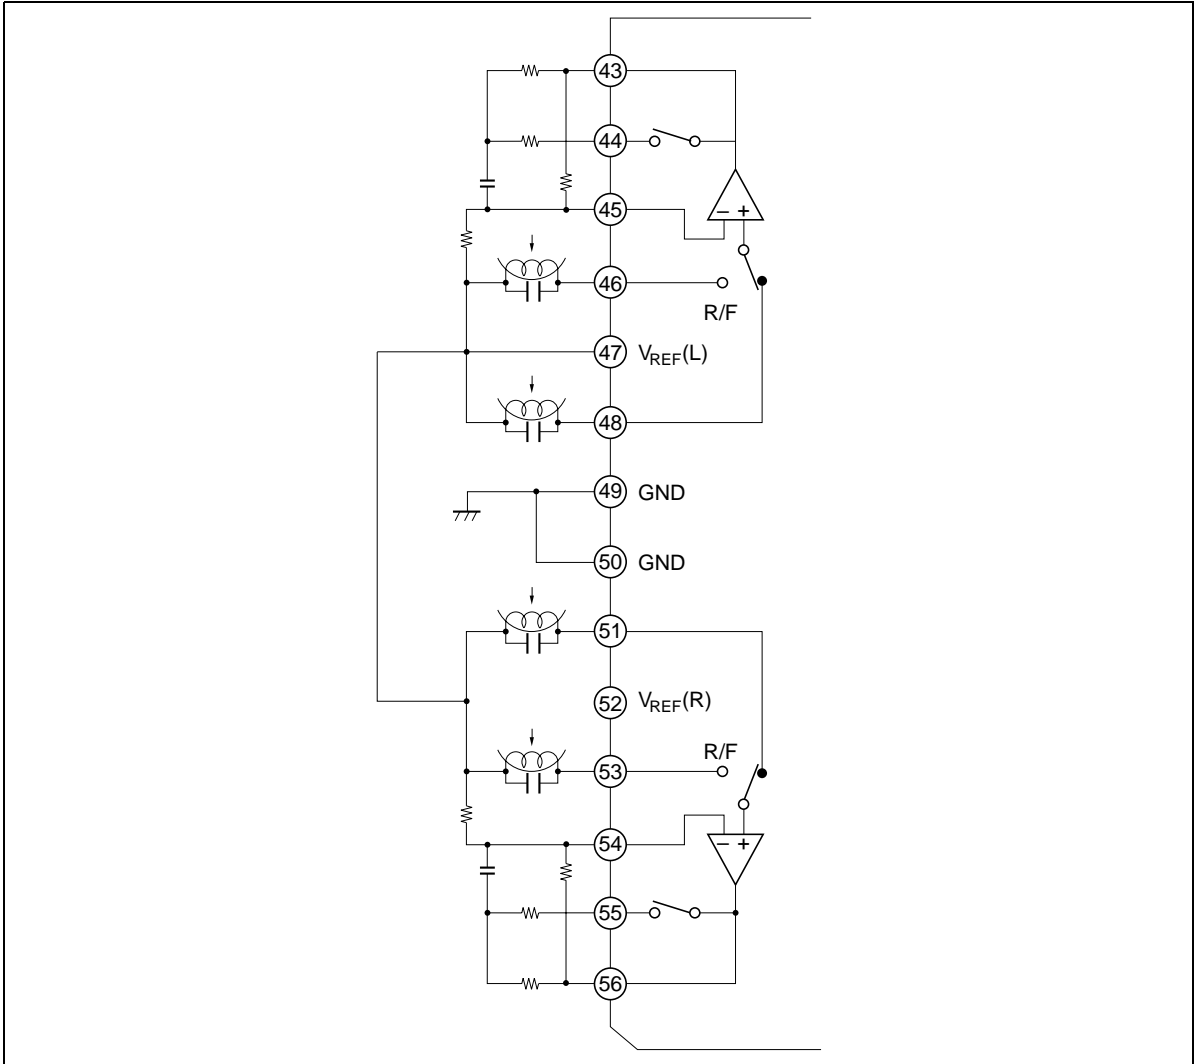

Figure 3 Application Circuit

7. The Sensitivity Adjustment of a Music Sensor

Adjusting MS AMP gain by external resistor, the sensitivity of music sensor can set up.

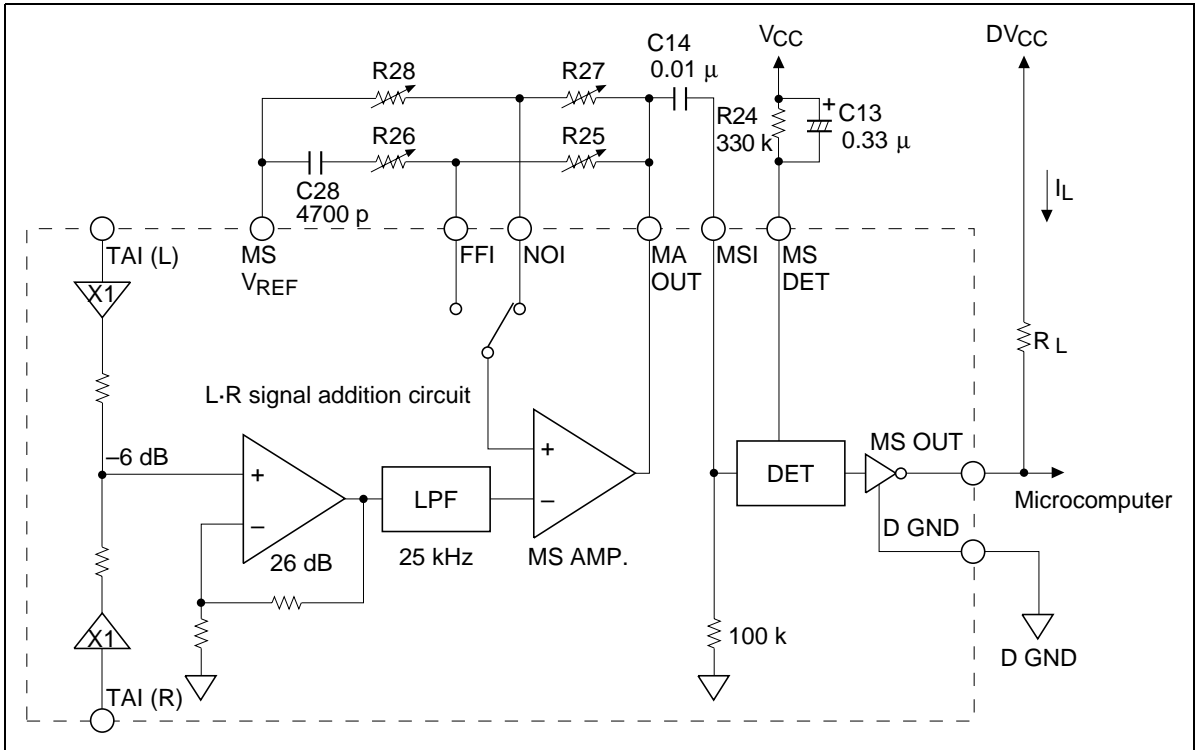

Figure 4 Music Sensor Block Diagram

Figure 5 Frequency Response

HA12163 Series

A. Normal mode

$$G_{v1} = 20 \log \left(1 + \frac{R_{27}}{R_{28}} \right) [\text{dB}]$$

$$f_1 = \frac{1}{2 \cdot \pi \cdot C_{14} \cdot 100 \text{ k}} [\text{Hz}], f_2 = 25 \text{ k} [\text{Hz}]$$

B. FF or REW mode

$$G_{v2} = 20 \log \left(1 + \frac{R_{25}}{R_{26}} \right) [\text{dB}]$$

$$f_3 = \frac{1}{2 \cdot \pi \cdot C_{28} \cdot R_{26}} [\text{Hz}], f_4 = 25 \text{ k} [\text{Hz}]$$

A standard level of TAI pin is 30 mVrms and the gain for TAI to MS AMP input is 10, therefore, the other channel sensitivity of music sensor (S) is computed by the formula mentioned below.

$$S = 20 \log \left(\frac{C}{30} \cdot \frac{1}{10 \cdot A} \right) [\text{dB}]$$

A = MS AMP. gain (B dB)

C = The sensing level of music sensor

S = -7.3-B [dB] C = 130 mVrms (typ.)

S is 6 dB up in case of the both channels.

8. Music Sensor Output (MS OUT)

As for the internal circuit of music sensor block, music sensor output pin is connected to the collector of NPN Type directly, therefore, output level will be “high” when sensing no signal. And output level will be “low” when sensing signal.

Connection with microcomputer, design I_L at 1 mA typ.

$$I_L = \frac{DV_{CC} - MSOUT_{Lo}^*}{R_L}$$

* $MSOUT_{Lo}^*$: sensing signal (about 1 V)

Notes: 1. Supply voltage of MS OUT pin must be less than V_{CC} voltage.

2. MS V_{CC} pin and V_{CC} pin are required the same voltage.

9. The Tolerances of External Components for Dolby NR-block

For adequate Dolby NR tracking response, take external components shown below.

Figure 6 Tolerances of External Components

HA12163 Series

10. PB Equalizer for Double Speed

PB equalizer can be design for double speed by using external components shown in figure 7. Application data is shown in figure 8.

Figure 7 Application Circuit for Double Speed
